

The key objective of members of the **A-SPEC Consortium** is to enable better decision making when dealing with their assets. This has occurred through streamlining of stake holders' processes from collection through to receiving, handling and storing of Asset Information.

- **Eliminate duplication of effort.** Significant duplication of effort exists in the digitising of as constructed information. This duplication exists between the private sector (who capture as constructed information), and council staff (who may digitise that information from paper plans);
- **Improve process efficiency,** in the process of accepting and processing lodgements, and in checking existing data against design criteria and/or design plans;
- **Improve customer service** to both internal and external customers of asset information; improve the quality of information held in council systems for audit and financial requirements, as well as operational and business requirements;
- **Increase the efficiency of information access** and result in greater customer satisfaction when dealing with inquiries from consultants, developers and prospective residents.
- **and** ultimately manage assets better to reduce the need for capital works and/or to reduce ongoing maintenance costs.

The key objective of the specifications is to record and provide "As Constructed" digital data in a GIS ready format to the A-SPEC consortium members.

b-spec outlines the specifications for the delivery of digital data relating to Buildings Assets.

d-spec outlines the specifications for digital files containing drainage data: pipe, pit, property connections and Water Sensitive Design Elements (**WSUD**).

o-spec outlines the specifications for digital data of Public Open Space and Recreation assets.

r-spec outlines the specifications for digital data of authorities' assets within the Road Reserve

s-spec outlines the specifications for digital data containing sewerage/waste water asset data.

w-spec outlines the specifications for digital data containing Water supply assets.

t-spec outlines the specifications for the collection of digital data relating to optical fibre/telecommunications assets.

Programmed for development 2nd and 3rd quarter 2018/19 F.Y.

Contact Us: GISSA International Pty Ltd is the founder of A-SPEC and is assisting the Consortium to manage the initiative.
